

**CTSA UPICT Subgroup meeting
December 1, 2009**

**Following CTSA IWG meeting
RSNA 2009**

General discussion

- Explore funding options for protocol extractions
- Physician/radiologist, CRO/education company, medical writer, research coordinator, clerical support person or other contractor could cut and paste material into template and refine/homogenize language
- Consider approaching RSNA BoD or participating community for funding
- Cannot directly approach pharma but consider parallel approaches:
 - e.g. approach RSNA BoD for pilot funding or for extraction of protocols based on medical need, approach PhRMA through fNIH for funding for extraction of protocols commonly used by pharma, approach patient advocacy groups for funding for extraction of protocols for their spotlighted diseases

Resource documents for wiki:

- Response/scoring/minimum threshold criteria
- Post links/URLs for:
 - RECIST 1.1
 - PERCIST (not validated yet)
 - Osteoscores
 - Lymphoma scores

Discussion of intersection of Profile and protocol

- QIBA protocols can be described as best consensus documents but have not been used in clinical trials
- QIBA interest in disseminating into practice to gather evidence for change
- UPICT may be described as super librarian and convener
- UPICT consensus protocols will require convening of experts, e.g. NIH consensus model or virtual meeting of 2-3 representatives from organization

Next steps:

- Group to review posted protocols
- RSNA staff to post workflow and scoring criteria/response criteria on wiki and UPICT RSNA 2009 poster on website and wiki
- Dr Dorfman to work on budget and funding for extractions
- Drs Dorfman and Yap to talk off-line
- Dr Yap to talk with ACRIN, e.g. Dr B. Siegel
